

# Inner West Busway along Victoria Road

FACT SHEET – APRIL 2009

## Driving through Drummoyne What to expect on completion

### Bus lanes

Dedicated bus lanes will be provided in peak periods. Bus lanes will operate as follows:

- AM peak - Citybound from Seymour Street, Drummoyne to The Crescent, Rozelle.
- PM peak – Citybound from Seymour Street, Drummoyne to Terry Street, Rozelle.
- 24 hours - Citybound over the Iron Cove Bridge between Park Avenue, Drummoyne and Terry Street, Rozelle.

### Moveable median barrier

A moveable median barrier will change traffic flow in Drummoyne between Seymour Street and Iron Cove Bridge in the AM peak.

The barrier will improve the safety of pedestrians and motorists by providing a physical barrier between the lanes of opposing traffic.

The barrier is made of linked concrete blocks that are joined together to form a continuous wall. The barrier is about 80cm high and is moved into place by a special vehicle. Moving the barrier through Drummoyne will take up to 20 minutes.

### New traffic arrangements

Cary Street access to Victoria Road citybound will be closed in the AM peak to maximise bus lane safety and efficiency.

Outbound slip lanes into Park Avenue and out of Lyons Road will be removed. Vehicles will still be able to turn into these streets. In the AM peak, four citybound lanes (including the bus lane) and two westbound lanes will be provided.

After the AM peak, the barrier will be moved back to the centre of Victoria Road to provide three lanes in each direction.

### Parking Clearways

Clearways will be in place on both sides of Victoria Road in the AM peak and in the PM peak. On street parking will be available at all other times.
